

TORO®

DL2000®

Series

Subsurface

Irrigation

System

Saves water and hassles. Sometimes the most efficient way to water individual plants is to use drip rather than spray. Toro DL2000 subsurface irrigation is ideal for odd-shaped designs, shrubs, container plants and the deep watering of trees without runoff.

Count on it.

Homeowners have trusted the Toro name for more than 85 years. Toro products mow our lawns, trim our hedges and clear our walks. Count on Toro sprinkler components for quality assurance, season after season.

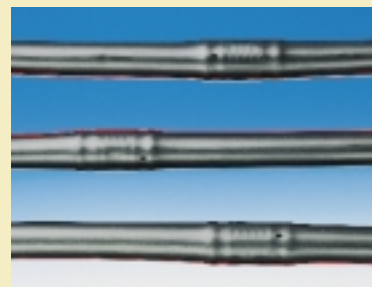

Professional products require professional installation.

The performance of an automatic sprinkler system is only as good as the professional who installs it. A quality contractor ensures long-lasting, efficient operation of your system. Choose a licensed professional with an established reputation and solid references. All materials and workmanship should be covered by a warranty.

DL2000 Series Subsurface Irrigation System

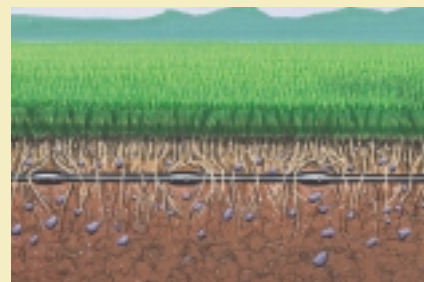

Toro DL2000 Series Subsurface Irrigation System

DL2000 is the most technologically advanced subsurface irrigation system with so many options. Providing the design flexibility you need, DL2000 is available in pressure-compensating, 12", 18" or 24" emitter spacing, and two flow rates of 0.53 and 1.02 GPH.

No root intrusion worries.

Toro DL2000 dripline features patented, non-toxic ROOTGUARD® technology, which prevents roots from clogging irrigation emitters. The pre-emergent, TREFLAN®, is built into the emitter during the molding process and requires virtually no maintenance.

Precise water application.

DL2000 eliminates overspray and potential water damage by delivering water at the roots, not through the air, leaving no water marks on expensive walls, glass or hardscape. Flowers and shrubs receive the precise amount of water to ensure beauty and health.

Features

- Patented, non-toxic ROOTGUARD technology guards against root intrusion
- Flexible, sturdy design fits into unusual spaces
- Pressure-compensating emitters for uniform water application
- Easy to install, requires minimal maintenance
