MICROBE-LIFT/AWP helps accelerate the decomposition of leaves, sediment and other organic matter during the fall and winter months. MICROBE-LIFT/AWP will also jump start your pond to a healthier environment in the spring.

MICROBE-LIFT/AWP is a two-part system of LIQUID bacteria and DRY, water soluble packets containing a blend of cellulase enzymes, cellulase-producing bacteria and a cold weather bacteria. The *cellulase enzymes*, along with the *cellulase-producing bacteria*, are the key to accelerating the breakdown of leaves, organic sediment and sludge all winter long. The *cold weather bacteria* and *liquid bacteria* take care of the initial breakdown by-products.

- Continues to provide sustained biological activity even in water temperatures under 40°F. (4°C.)
- Contains psychrophilic strains (cold weather bacteria)
- If frozen, bacteria will remain effective after thawing out
- Effective in darker conditions (under ice and snow)
- Helps to maintain a healthy immune system for your fish during the winter months
